

Teeth Whitening Consent Form

Today's Date: _____

Procedure Description

The BEYOND™ WhiteSpa Select treatment is designed to lighten the color of your teeth using a combination of a peroxide based gel and a specially designed lamp. The treatment involves using the gel and lamp in conjunction with each other to produce the whitening action. During the procedure, the technician will apply the whitening gel to your teeth and your teeth will be exposed to the light from the lamp for three (3), 20 minutes sessions. During the entire treatment a plastic retractor will be placed in your mouth to help keep it open. The technician will also apply lip cream as needed and you will be provided a pair of protective eyewear to use during the treatment. After the treatment is completed, you will remove the retractor and eyewear and will be instructed to rinse your mouth with water. Before and after the treatment, the shade of your teeth will be assessed, shown to you, and recorded.

Risk of Consent for Treatment

I also understand that the BEYOND™ WhiteSpa Select treatment results may vary or regress due to a variety of circumstances. I understand that almost all natural teeth can benefit from the BEYOND™ WhiteSpa Select whitening treatment and significant whitening can be achieved in most cases. I understand that BEYOND™ WhiteSpa Select whitening treatments are not intended to lighten artificial teeth, caps, crowns, veneers or porcelain, composite or other restorative material and that people with darkly stained yellow or yellow-brown teeth frequently achieve better results than people with gray or bluish-gray teeth. I understand that teeth with multiple colorations, bands, splotches or spots due to tetracycline use or fluorosis may have less dramatic whitening results. I understand that teeth with many fillings or cavities may not lighten and are usually best treated with other non-bleaching alternatives. As with all over-the-counter and other non-dentist prescribed tooth whitening, I should discuss my own dental health situation with my dentist prior to using the BEYOND™ WhiteSpa Select treatment.

- I understand the BEYOND™ WhiteSpa Select treatment is not recommended for pregnant or lactating women, or clients under the age of 16 years.
- I understand that the BEYOND™ WhiteSpa Select treatment cannot be undergone if I have an allergy to peroxides or glycols.
- I understand that the results of my Beyond™ WhiteSpa Select treatment cannot be guaranteed.
- I understand that whitening treatments are considered generally safe by most dental professionals and are sold over-the-counter to individuals.
- I understand that although my aesthetician has been trained in the proper use of the BEYOND™ WhiteSpa Select system, the treatment is not without risk.
- I understand that some of the potential complications of this treatment include, but are not limited to:

Tooth Sensitivity

During the first 24 hours after the BEYOND™ WhiteSpa Select treatment, some clients can experience some tooth sensitivity. While uncommon with the BEYOND™ WhiteSpa Select system, tooth sensitivity is a common side effect of peroxide-based tooth whitening. It is usually mild, but it can be worse in susceptible individuals. Normally, tooth sensitivity following the use of peroxide-based whitening products subsides within 24 hours. People with existing sensitivity, recently cracked teeth, abfractions (micro-crack), open cavities, leaking fillings, or other dental conditions that cause sensitivity may find that those conditions increase or prolong tooth sensitivity after the BEYOND™ WhiteSpa Select treatment.

Gum Irritation

In rare cases, whitening gel may come in contact with the gum tissue during the treatment and may cause inflammation or whitening of the gums or gum line. This is due to inadvertent exposure of a small area of those tissues to the whitening gel and the inflammation and/or whitening is usually temporary and will subside almost immediately, with color change in the gum tissue reversing within 30 minutes.

Dry Lips

The BEYOND™ WhiteSpa Select treatment involves three, 20-minute sessions during which the mouth is kept open continuously for the entire treatment by a plastic retractor. This could result in dryness or chapping of the lips or cheek margins, which can be treated by application of lip balm, petroleum jelly, or Vitamin E cream.

Relapse

After the BEYOND™ WhiteSpa Select treatment, it is natural for the teeth to regress somewhat in their shading over time. This is natural and should be very gradual, but it can be accelerated by exposing the teeth to various staining agents. I understand that the results of the treatment are not intended to be permanent and that repeat or touch-up treatments may be needed for me to maintain the tooth shade I desire for my teeth.

Consent & Release

In signing this informed consent I am stating I have read this information consent and I fully understand it and the possible risks, complications and benefits that can result from the BEYOND™ WhiteSpa Select treatment and that I agree to undergo the treatment as indicated by the printed instructions provided to me by my aesthetician.

By signing this document in the space provided I indicate that I have read and understand the entire document and that I give my permission to undergo the BEYOND™ WhiteSpa Select treatment.
